EDUCATION

University of Virginia | Charlottesville, VA *Expected May 2027*
Bachelor of Arts in Economics and Computer Science GPA: 3.58/4.00
Relevant Coursework: Econometrics, Intermediate Microeconomics, Intermediate Macroeconomics, Financial Markets, Probability & Statistics, Data Structures & Algorithms, Business Analytics, Data Visualization

PROFESSIONAL EXPERIENCE

Kids at Risk Action (KARA) | Minneapolis, MN *Jun 2026 – Aug 2026*
Research & Policy Analyst Intern

- Constructed the de-identified 20-year case panel underpinning KARA's $4.2 billion estimate of Minnesota's annual cost of child-welfare inaction, hand-coding ACE exposure and time to permanency in Python.
- Benchmarked prevention spending against WSIPP benefit-cost ratios; documented assumptions in Python and Excel.
- Authored a state appropriations policy paper and 6 short-form briefing videos for Minnesota legislators.

Virginia Consulting Group | Charlottesville, VA *Sep 2023 – Sep 2025*
Analyst

- Developed bottom-up and top-down TAM models from Census and industry data to assess 3 clients' expansion plans.
- Profiled 5–10 competitors per client on pricing, hours, review sentiment and channels to diagnose customer losses.
- Named Featured Presenter (2024) after client leadership voted our recommendations the cohort's best presentation.

RESEARCH EXPERIENCE

University of Virginia | Charlottesville, VA *Jan 2026 – May 2026*
Research Assistant

- Demonstrated fast-food density does not significantly predict preventable ED visits once income is controlled; median household income was the strongest predictor ($p = 0.004$) across 62 NY counties.
- Built a 372-observation county-year panel in Stata from NY SPARCS, USDA Food Atlas and Census ACS data via a HUD ZIP-to-county crosswalk; ran pooled OLS with clustered errors and VIF tests.

INDEPENDENT RESEARCH & PROJECTS

Medicaid Expansion and Job Lock | Working paper & policy memo, R Paper | Memo

- Found ACA Medicaid expansion raised low-income adults' coverage 13.3 pp and cut uninsurance 9.9 pp with no change in work or job mobility (Callaway–Sant'Anna DiD; 191,112 CPS-ASEC records, 40 states).
- Showed the usual base year understates coverage gains by 25%+ and yields a spurious 3.3 pp employment effect.

peffects | Python, NumPy, SciPy Code

- Implemented TWFE, Goodman-Bacon, Callaway–Sant'Anna, Sun–Abraham, synthetic control and wild cluster bootstrap from the original papers, reproducing all 37 published values across 3 studies.
- Replicated Cheng & Hoekstra's (2013) finding that stand-your-ground laws raised homicides ~8%, and showed the effect loses 5% significance under wild cluster bootstrap inference ($p = 0.055$).

costengine | TypeScript, Vite, Vitest Live demo | Code

- Extended KARA's cost-of-inaction model into a Monte Carlo benefit-cost engine that runs 50,000 simulations.
- Deployed a public calculator reporting NPV, benefit-cost ratio, distributional incidence and probability of payoff.

forecast-audit | Python, pandas, SciPy Code

- Audited 3.1M FiveThirtyEight forecasts, finding election models underconfident (calibration slope 1.36).
- Priced model upgrades as a betting edge: full-Kelly wagers on Deluxe over Lite earned 0.022 log units per race.

TECHNICAL SKILLS & ACTIVITIES

Languages: Python, R, Stata, SQL, TypeScript, LaTeX
Libraries & Tools: pandas, NumPy, SciPy, LightGBM, Flask, pytest, Git, GitHub Actions, Excel, Tableau, Jupyter
Methods: Causal inference (DiD, synthetic control), econometrics, Monte Carlo, cost-benefit analysis, machine learning
Activities: TheCourseForum (frontend developer); Economics Club; SASE; Club Tennis
